Question

How to enable Fisheye dewarping function on WebCam Server, Multi Viewer and Center V2?

How to do

For **WebCam Server** and **Multi Viewer**:

1. On the Main System, click the **Network** button and select **WebCam Server**.

2. Click the **Video** tab. Select **Actual size** from the Max. Image size drop-down list and click **OK**.

3. To enable Fisheye dewarping function on:

   - **WebCam Server**

     A. Click the **Change Quality** button, select **Hardware Streaming H.264** and select the displayed resolution.

B. Right-click on the screen and select **Geo Fisheye**.

● **Multi Viewer**

A. Click the **Quality** button, select a fisheye camera, select **Hardware Streaming H.264** and select the displayed resolution.

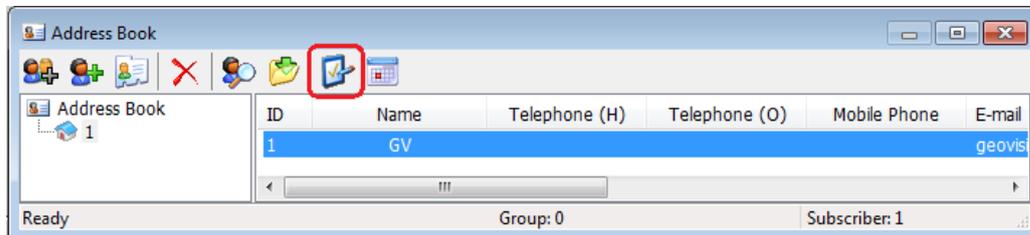

B. Right-click on the fisheye live view and select **Geo Fisheye.**

For **Center V2**:

1. Before connecting the GV-System to Center V2, click the **Accounts** button . The
   Address Book dialog box appears.

2. Select a subscriber and click the **Subscriber Setting** button. This dialog box appears.

3. Select **Actual Size** from the Image Size drop-down list. Click **OK**.

4. Connect the GV-System to Center V2.

5. Left-click on the fisheye live view to display the live view in single screen.

6. Right-click on the screen and select **Geo Fisheye**.
