

[FAQ]

What if GV-BL3410 has a poor image quality at night ?

Release Date: 7/09/2015

Applied to:

GV-BL3410

Question:

What should we do if the camera live view is just so poor at night?

Answer:

Please change the shutter speed of the camera to 1/5 shown as follows.

For your information: A camera's shutter determines when the camera sensor will be open or closed to incoming light from the camera lens. The shutter speed specifically refers to how long this light is permitted to enter the camera. Slower shutter speeds are used with less light so that light can enter the camera and illuminate the image.
