		Internet Security	
		Total Protection	

When you launch the GV software, a few of antivirus software may pop up warning messages to suggest GeoVision's software could be harmful. If you incorrectly block the GeoVision software by the antivirus software, the GeoVision software will not function normally.

Take F-Secure anti-virus for example, the window below may pop up to warn you against continuing to access the GeoVision software. Just select the option that can continue running the GeoVision software since they are compatible.
