# How to export the video file with Windows standard codec?

**Article ID: GV1-13-05-07-n**

**Release Date: 05/07/2013**

### Applied to

GV-System

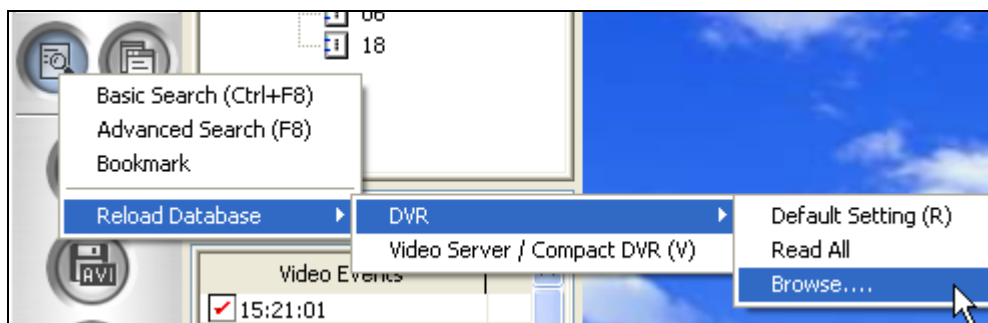

### Question

How to export the video file with Windows standard codec?

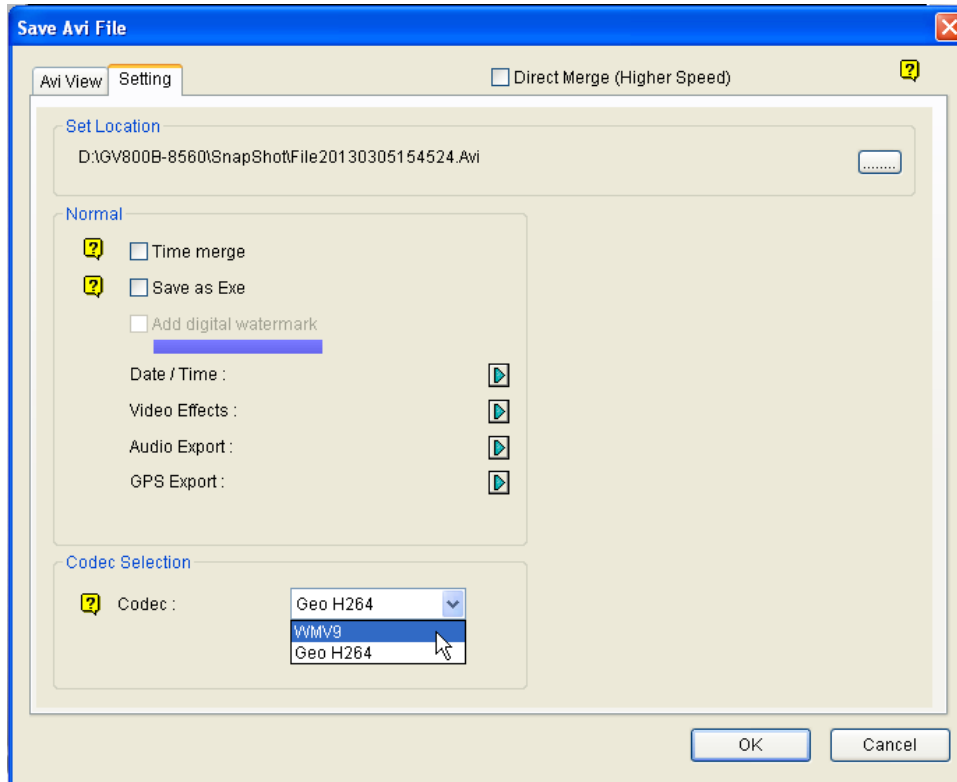

### Answer

To export the video file with Windows standard codec, follow the steps below:

1. Launch ViewLog or enable Remote ViewLog.
2. The ViewLog or Remote ViewLog will load the database automatically upon being launched. Alternatively, you can click the **Advanced** button, select **Reload Database**, click **DVR** and then **Browse** to locate the desired video file.

3. Select the desired video file from Video Events list, and right-click it to select **Save as Avi**. This dialog box appears. Alternatively, you may click on the **Save as Avi** button to call it up.

4. Click the **Setting** tab and select a saving path in **Set Location**.
5. In **Codec Selection**, select **WMV9** to export the video file with Windows standard codec.
6. Click **OK** to apply the settings.

After the export is done, you can directly play the exported video file with Windows Media Player.
