

[FAQ]

Is it possible to receive POS without any camera connected in GV-System?

Article ID: GV28-03-04-n

Release Date: 03/04/2013

Applied to

GV-System

Question

Is it possible to receive POS without any camera connected in GV-System?

Answer

A camera is required to configure POS integration through GV-System.

If you already have a GV-DVR System with analog cameras, you can use a simple video splitter to split the signal from one of the cameras to provide a virtual signal for POS data.

For GV-Combo Cards, you can loop the TV out connector back to one of the channels as a virtual channel. You do not need to record the video on this channel to store the POS data.
