Can I see de-warped GV-Fisheye images from my cell phone?

Article ID: GV13-03-28-k

Release Date: 03/28/2013

Applied to

GV-Mobile Applications

Question

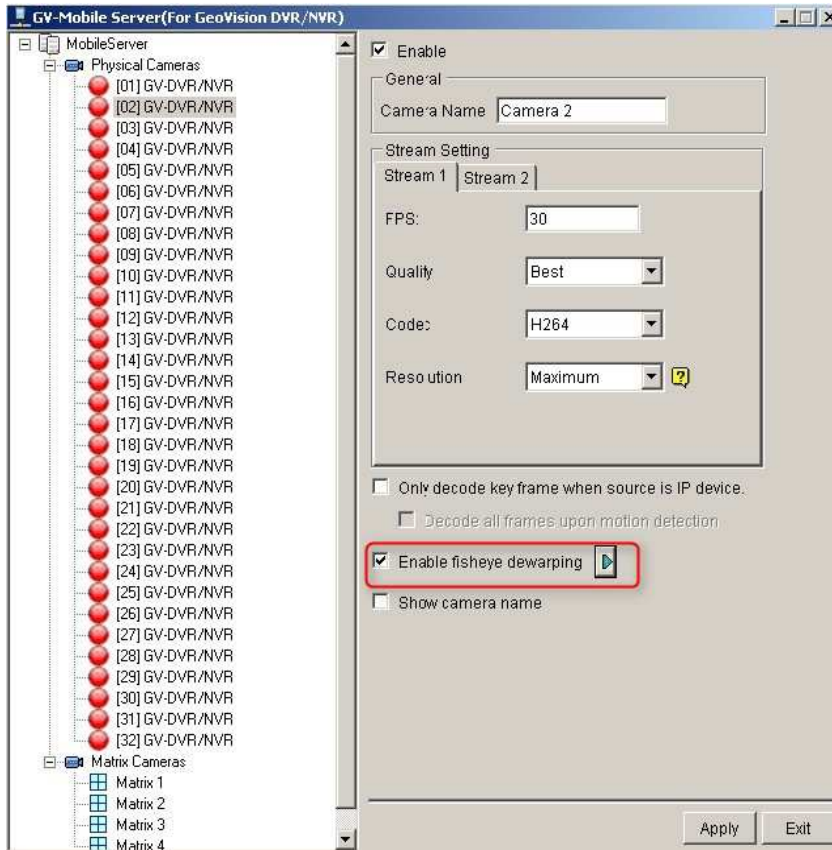

Can I see de-warped GV-Fisheye images from my cell phone?

Answer

To see de-warped images through GV-Mobile Applications on your cell phone, you need GV-Mobile Server. GV-Mobile Server is the software included in the Software DVD. By connecting to fisheye cameras using the GV-Mobile Server, you can enable the fisheye de-warping function on the GV-Mobile Server to achieve and view the de-warped images on your cell phone. Follow the steps below to enable the fisheye de-warping function on the GV-Mobile Server.

1. Install and open the GV-Mobile Server software.
2. Choose the designated GV-Fisheye Camera from the camera list on the left.
3. Select the **Enable fisheye dewarping** option.
4. Click **Apply**.

Note: In Software DVD V8.5.6.0 or later, you should find the GV-Mobile Server software in the Paid Software section but it can be integrated with GV-System for free.

For details, see *Establishing Connections*, Chapter 3 in *GV-Mobile Server V1.4 User's Manual* on Software DVD.
