[FAQ]

The video exported through Viewlog / Remote viewlog v8.62 shows upside down in VLC player

Release Date: 1/5/2016

Applied to:

Viewlog / Remote viewlog v8.62

Question:

The video exported through Viewlog / Remote viewlog v8.62 shows upside down in VLC player. (Save as Avi with H.264 use)

Answer:

This is actually considered as software spec. However, we have a workaround solution that can help users solve the problem. In VLC player, Go to Tools => Effect and Filter => Select Video Effect tag => Enable Rotate => Then rotate the playback image 180 degree and press " Close " button

For any question on the information provided, please feel free to submit your question to our support window at support@geovision.com.tw
