

## [FAQ]

### GV-VMS shows GeoFisheye GPU Create Failed?

Release Date: 1/30/2015

#### Applied to

GV-VMS V14.10

#### Question

When attempting to use de-warping fisheye cameras in VMS, the message “GeoFisheye GPU Create Failed” message pops up?

#### Answer

In order to decrease CPU loading when de-warping fisheye camera, VMS V14.10 now uses GPU decoding to support the feature. If the VGA card driver is not installed or not able to support Direct X 10 and above, then the “GeoFisheye GPU Create Failed” message will pop up.

To avoid the message, check and update the VGA card driver to the latest version.
